AJAY CHAWLA

SOC Analyst | Cyber Security Analyst | VAPT | Incident Response

Indore, Madhya Pradesh, India | +91 9589324755 | ajaychawla2003@gmail.com | linkedin.com/in/ajay-chawla-978881227

PROFESSIONAL SUMMARY

Detail-oriented SOC Analyst with hands-on experience monitoring, triaging, and responding to security alerts in a 24x7 Security Operations Center. Skilled in SIEM administration, threat detection, incident response, and log analysis across endpoint, network, and cloud environments. Seeking to leverage strong analytical skills and a Certified Ethical Hacker (CEH) certification to contribute to a Tier 1/2 SOC role.

TECHNICAL SKILLS

- SIEM & EDR/NDR Tools: ArcSight, Splunk, Seceon, Trend Micro EDR/NDR, Innspark, CDAC SIEM
- Security Operations: SIEM Monitoring, Incident Response, Threat Hunting, Alert Triage, IOC Analysis, Phishing Mail Analysis, Malware Analysis, Log Analysis, Threat Detection
- Threat Intel & Sandboxing: VirusTotal, Abusipdb, OSINT
- VAPT & Testing Tools: Burp Suite, Nmap, Wireshark
- Cloud & Identity: Microsoft Azure Active Directory (Azure AD), Active Directory, Cloud Computing
- Forensics: Digital Forensics
- Technical Knowledge: Networking, Windows & Linux Security, Kali Linux, Web Application Security, Cryptography, Python

PROFESSIONAL EXPERIENCE

SOC Analyst | CDAC (Centre for Development of Advanced Computing)

Oct 2025 – Present

Thiruvananthapuram, Kerala

- Monitor SIEM dashboards around the clock in a 24x7 SOC, detecting and triaging malware alerts, suspicious traffic, brute-force attempts, phishing activity, and anomalous behavior across client environments.
- Perform first-level incident triage and false-positive analysis, using log evidence and contextual analysis to distinguish genuine threats from noise.
- Investigate suspicious IPs, malicious domains, and indicators of compromise (IOCs), correlating alerts across multiple log sources to determine scope and severity.
- Analyze phishing emails and suspicious files/URLs using VirusTotal and other sandbox techniques to confirm malicious intent before escalation.
- Handle and document end-to-end incident lifecycle for SSH brute-force attacks, DNS anomalies, malware detections, and web-based attack attempts, from detection through escalation.
- Work across multiple SIEM and monitoring platforms (ArcSight, Splunk, Seceon, Trend Micro, Innspark, CDAC SIEM) to correlate events and maintain situational awareness of client environments.
- Follow structured escalation and shift-handover procedures to ensure continuity of monitoring and no gaps in coverage across a 24x7 operation.
- Provide client-facing support during security monitoring and incident handling, communicating findings clearly to non-technical stakeholders.

VAPT Intern | CyberSRC Consultancy

Oct 2024 – Feb 2025

Noida, India

- Conducted penetration testing and vulnerability assessments on web applications and networks, identifying exploitable weaknesses before attackers could.
- Used Burp Suite, Nmap, and Wireshark for reconnaissance, traffic analysis, and vulnerability validation.
- Prepared detailed vulnerability reports and validated remediation fixes with development teams.

PROJECTS

- AutoPenTest Tool – Developed an automated penetration testing tool for identifying vulnerabilities such as XSS, SQL Injection, CSRF, and SSRF, with integrated automated scanning and reporting for web applications and APIs.
- Home Splunk Lab – Deployed a personal Splunk instance to ingest and analyze logs, building custom detection rules, dashboards, and correlation searches to practice SIEM alert triage and incident investigation.

CERTIFICATIONS

- Certified Ethical Hacker (CEH)
- Google Cybersecurity Professional Certificate – Coursera
- Digital Forensics Essentials – EC-Council
- Ethical Hacking Essentials – EC-Council
- Ethical Hacking – NPTEL

EDUCATION

Bachelor of Technology (B.Tech) – SAGE University, Indore | CGPA: 8.24

Higher Secondary Certificate (12th) – Malav Vidhya Mandir | 75%

Secondary School Certificate (10th) – Malav Vidhya Mandir | 74.8%

ACHIEVEMENTS

- Completed a 100-day streak on TryHackMe (Top 3% of learners) and actively upskilling on the LetsDefend platform through real-world SOC investigation and incident-response simulations.
